Course: B.Tech CSE (Core)

Course Code: CSE0001

School :SCOPE

Introduction :-

In today's fast-changing digital world we observe that , digital literacy has become an essential and important skill for students. It is not only about how we using technology but also about using it safely, responsibly, and effectively. I have designed this project to help students understand different aspects of digital literacy with the help of practical tasks.

As I have been a Student Digital Ambassador, I worked on five tasks that includes creating an infographic, building a digital portfolio, exploring coding and collaboration tools, learning
professional communication, and understanding cybercrime awareness. Each task has helps he users provide hands-on experience with real digital tools.

I have organized this project in a GitHub repository, which also helped me in learning how to manage and present work professionally online. Overall, this project has helped me to improve my technical skills, awareness, and confidence in using the digital platforms.

Task 1: Digital Literacy Infographic :-

In this task, I have created an infographic to explain the concept of digital literacy with the help of Canva. The main objective here was to

design a very simple and visually attractive resource that can help students understand digital literacy.

The infographic here includes keyy topics such as the meaning and definition of digital literacy. It also includes useful digital tools for students and safe internet practices, professional online presence, and email etiquette. I have used icons, colors, and short points to make the design here engaging and easily understandable for the users.

The main challenges I faced here was deciding how much information should I include without making the infographic tooo much crowded. I have learned that visual clarity is a very important factor, and information should be presented in a concise way for easy understanding.

This task helped me improved my creativity and helped me understand how to present information visually. It also made me realize that digital literacy is not just about technical knowledge but it is also about responsible usage of digital tools.

Task 2: Digital Portfolio :-

In this task, I have created my digital portfolio by setting up the profiles onn platforms like GitHub, LinkedIn, and Kaggle. These platforms are very important for building a professional online presence.

On GitHub, I have created a profile README to introduce myself and share my learning goals. On LinkedIn, I have added my education details and started to building a

professional profile.

Kaggle provides users the opportunities to learn and practice data- related skills.

This task helped me understand the importance of

Maintaining a professional identity online and digitally . Many companies and recruiters often check online profiles before offering

Internships or jobs to students. Therefore we must have a well-maintained profile is very important.

In the future, I am planning to regularly update my profiles, upload projects on GitHub, with which I can connect to professionals on

LinkedIn. This will help me build a strong career foundation and improve my opportunities for future job and internships.

Task 3: Coding & Collaboration Platforms :-

In this task, I have explored both coding platforms and collaboration tools. I have used HackerRank to solve a beginner- level problem, which has helped me understand tha structure of coding challenges and improve my skills of problem solving.

For the collaboration I have created a Google Form titled "Digital Literacy Awareness Quiz." The form created contains five questions which are related to digital literacy including multiple-choice annd short-answer questions. I have also viewed the responses using Google Sheets, which helped me understand how data is collected and analyzed.

This task showed me how digital tools can be used effectively for learning and collaboration. Coding platforms Helped me in improving programming skills, while tools like Google Forms are very useful for surveyss and quizzes.

Overall, this task enhanced my technical knowledge and introduced my visionary nd knowledge to useful tools that will help me inn my academic journey.

Task 4: Email Etiquette & Communication :-

In this task, I have learned about professional communication annd email etiquette. I have wrote two formal emails one requesting an assignment deadline extension and
another applying for a summer internship.

I have ensured that both emails must had a clear subject line, proper greeting, well structured body, and a polite closing. I have also created a checklist of social media do's and don'ts to
Promote the responsible online behavior.

Poor digital communication can create mis understandings and affect one's reputation. Using informal
language orr not following proper structure can make an email look unprofessional.

This task has helped me understand the importance of clear, respectful, and structured communication in both academic and professional environments.

Task 5: Cybercrime Awareness :-

In this task, I studied and go through UPI fraud as a common cybercrime in India. UPI fraud happens in when attackers trick users into the
sharing sensitive information or making the payments through fake requests.

I have created a case study explaining how such frauds usually occur and who iss usually targeted. I also prepared a prevention
checklist that in includes safety tips like not sharing OTPs, avoiding suspicious links, and verifying all transactions.

I have included important reporting channels such as the National Cyber Crime Portal and helpline numbers 1930.

This task increases my awareness of online threats and taught me how to stay safe while using digital platforms.

Conclusion :-

This project helped me understand the importance of digital literacy in todays world. I have learned how to use digital tools, create a professional online presence, communicate effectively, and stay safe from cyber threats. Each task has provided practical knowledge and improved my confidence. The skills I have gained will be useful in all of my academic journey and future career. Overall, this project was a valuable experience that has enhanced my understanding of the digital world.
